What if your IDE could catch security bugs instantly?

What is SonarLint?

- IDE plugin for real-time code analysis
- Detects:
- Bugs
- Code smells
- Security vulnerabilities
- Works while you are typing code

Why SonarLint is Used in Industry?

- Instant feedback (no need to wait for pipeline)
- Improves code quality + secure coding habits
- Helps developers fix issues early (Shift Left)
- Reduces technical debt

What is Snyk?

- Security tool for dependency & vulnerability scanning
- Detects issues in:
- Open-source libraries
- Containers
- Infrastructure (IaC)
- Provides:
- Known CVEs
- Fix suggestions

Why Snyk is Used in Industry?

- Prevents supply chain attacks
- Identifies vulnerable third-party libraries
- Integrates with:
- GitHub
- CI/CD pipelines
- Enables continuous security monitoring

SonarLint vs Snyk

- SonarLint:
- Focus → Your code (first-party code)
- Snyk:
- Focus → Dependencies (third-party code)

SonarLint + Snyk Combo

- SonarLint → catches issues in your code instantly
- Snyk → finds vulnerabilities in external libraries
- Together:
- Full coverage (code + dependencies)
- Early detection of risks
- Better secure development
